

MINDD Foundation promotes an integrative approach to healthcare for the whole family with a focus on biomedicine, nutrition, neuro-development and allied therapies. We help practitioners and patients find effective treatments for Metabolic, Immunologic, Neurologic, Digestive, Disorders that often affect the mind.

Our focus is on paediatric disorders such as Autism, ADHD, Asthma, allergies, chronic illness, learning and language delay, and digestive and behavioural disorders. Research is showing that these children are coming from families with a history of brain-immuno-gut disorders such as allergies, digestive disorders, anxiety and depression.

The rise in childhood disease signals a need for preventative healthcare that focuses on cellular health by optimizing nutrient intake while minimizing toxins. www.mindd.org

The MINDD Foundation will be presenting world-class seminars at the Auckland Gluten Free Food and Allergy Show, [click here](#) for the full timetable.
